OFF ROAD

BMX INSERT ASSEMBLY INSTRUCTIONS

The Shingleback BMX Inserts are a safe way to transport bikes with 20" wheels including kids bikes and BMX. The insert holds the bike's top wheel in place without contacting the wheel rim. Remember you can adjust the wheel cradles if needed to ensure no bike-to-bike contact.

The BMX Inserts are only suitable for use on the Shingleback racks with the new cradles, they're not compatible with the Shingleback CLASSIC rack.

1

Remove the plastic sleeves from the clamp tube and fit to the part of the cradle closest to your car

2

3

Loosen the knob enough to turn the clamp tube 90° and position onto the plastic sleeves fitted to the cradle

4

Turn the clamp tube back to parallel with the insert and tighten the black knob to secure

5

Use the CAM buckle strap in place of the bungee to secure your 20" bike wheel to the cradle as shown.

BMX tyres vary in size so the cradle bungee is not recommended as the bungee may not stretch around the 20" wheel securely.

6

7

TIP: The CAM buckle strap can be cut to length or tie the loose end of the strap to prevent it flapping around see Fig. 6

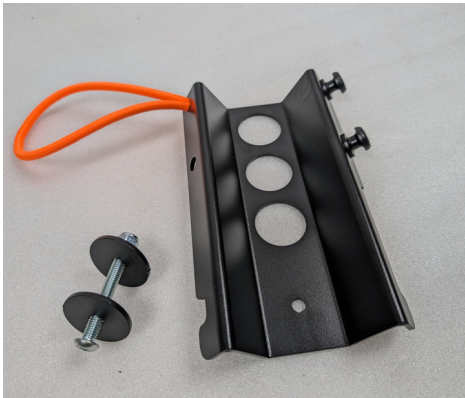

TIP: To hold the strap in place when the bike is removed simply tie a hitch knot around the cradle as shown in Fig.7

SHINGLEBACK EXTENDER ASSEMBLY INSTRUCTIONS

The Extender can be used to raise or lower the bottom bar height to accommodate small or long bikes by simply flipping either up or down.

The Extenders are only suitable for use on the Shingleback racks with the new cradles, they're not compatible with the Shingleback CLASSIC rack.

1

Parts included

2

Extender in
lowered position

Place one washer under the head of the bolt and one at the rear with the nut, tighten firmly but don't crush the bottom bar.

3

Extender in
raised position

Depending on the size of the bikes tyre, the bungee loop can be attached to either or both black buttons to ensure tension on the bungee.
