

# SHINGLEBACK ROADIE INSERTS ASSEMBLY INSTRUCTIONS

The Shingleback Roadie Inserts are a safe and innovative way to transport road, gravel and CX bikes. The 3-piece insert holds the bike top wheel in place without contacting the wheel rim. You can adjust the wheel cradles to ensure no bike-to-bike contact. You will need the roadie tilt brackets if you have multiple roadies next to each other. (sold separately)

The Roadie Inserts are only suitable for use on the Shingleback racks with the new cradles, they're not compatible with the Shingleback CLASSIC rack.

The Inserts clip into place (Fig. 1) and the wheels are then firmly secured by the orange bungies. Please note the Insert with the bike icon sits facing towards/closest-to your bike (Fig. 2) NO bike icon is closest to your car. On some bikes there may be a slight gap between the clip Insert located at the bottom of the cradle and the wheel. Depending on the size of your Roadie's wheel

ALWAYS remove the 3 Insert parts when not in use. The Inserts must not be left in place whilst driving.

WE HOPE YOU ENJOY USING YOUR SHINGLEBACK
